DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Allowable Subject Matter

Claims 1-9 are allowed.

The following is an examiner's statement of reasons for allowance:

With respect to claim 1, prior art fails to teach or reasonably suggest, either singly or in combination, a method of preparing a mixed formulation of sustained release microspheres by a continuous one-step process comprising the step of continuously supplying the mixed fluids from the two to four different fluids to a dryer via a single spray nozzle by controlling the mixing ratios of the fluids according to the time to dry the fluids, in addition to the other limitations of the claim.

Claims not specifically addressed are allowable due to their dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Akagi et al. (US 5,723,269) discloses a method of preparing a formulation of sustained release microspheres by preparing two fluids for preparation of the sustained released microspheres containing a biodegradable polymer (polylactic acid) and a peptide drug (leutinizing hormone-releasing hormone), wherein the fluids are supplied to a spray dryer via a two-liquid type nozzle (col. 1, line 67; col. 3, lines 17-18; col. 6, lines 32-40; col. 9, line 63 - col. 10, line 19; col. 11, lines 51-53;). Examiner notes that Akagi et al. explicitly teaches away from mixing the fluids in a single nozzle (col. 10, lines 14-19). Further, Akagi et al. also fails to disclose controlling the mixing ratios of the fluids according to the time to dry the fluids. Therefore, Akagi et al. cannot teach or reasonably suggest "continuously supplying the mixed fluids from the two to four different fluids to a dryer via a single spray nozzle by controlling the mixing ratios of the fluids according to the time to dry the fluids".

Ikura et al. (US 4,777,033) exemplifies the typical prior art methods of preparing sustained release pharmaceuticals having a variety of sustained release profiles. The mixture ratio is varied in batch-type processes producing particles having a variety of release profiles, and thereafter the different particles are mixed. See column 3, lines 5-60 and Example 1 in column 8.
